

Jayasoorya Suryadas

MERN Stack Developer

✉ jayasuryabrocamp@gmail.com ☎ +91 8281017439 🔗 PortFolio  LinkedIn  GitHub

PROFILE SUMMARY

A detail-oriented Full Stack Web Developer undergoing intensive, hands-on training in the MERN stack at Brototype, with a Bachelor's degree in Computer Applications. Experienced in building real-world applications that demonstrate strong problem-solving capability and a focus on clean, secure, and user-centric development. Brings a collaborative mindset, adapts quickly to new technologies, and consistently seeks opportunities for continuous learning and professional growth.

TECHINICAL SKILLS

Languages

JavaScript, TypeScript, HTML, CSS

Frontend Development

React.js, Redux, Redux Toolkit, Bootstrap, Tailwind CSS

Backend Development

Node.js, Express.js, MongoDB

Databases

MongoDB, MySQL, PostgreSQL

Data Structures & Algorithms

Problem-solving using core DSA concepts (Arrays, Strings, Linked Lists, Stacks, Queues, Trees, Hashing)

Cloud & Deployment

AWS (EC2, S3, Route 53), Firebase, Cloudinary, Vercel

PROJECTS

Version Vault 🔗

Full-Stack Version Control System & CI/CD Platform | Tech Stack: React 18, Vite, TypeScript, TailwindCSS, Redux Toolkit, Node.js, Express, MongoDB, Redis, BullMQ, Dockerode, Socket.io, AWS EC2, AWS S3, Cloudflare A custom-built, full-stack Version Control System and CI/CD platform built from the ground up to securely manage code repositories, track issues, and execute automated pipelines — similar to GitHub.

- **Custom CI/CD Pipelines:** Engineered an automated pipeline system where build/test workflows execute inside isolated Docker containers using dockerode, ensuring zero bleed between runs.
- **Real-Time Log Streaming:** Implemented WebSockets (Socket.io 🔗) to stream live CI/CD execution logs directly to the frontend in real-time, matching the GitHub Actions UX.
- **AI-Driven Repository Scaffolding:** Integrated the Groq SDK to allow users to generate entire project structures and boilerplate code instantly by selecting their tech stack.
- **Async Job Queueing:** Built a high-performance background job queue using Redis and BullMQ to handle heavy Git operations and pipeline executions without blocking the main server.
- **Authentication & Security:** Built a secure authentication flow featuring OTP verification, Google OAuth integration, and JWT-based session management.
- **Architecture:** Strictly adhered to SOLID Principles and Clean Architecture. Used Dependency Injection (tsyringe) to keep the backend modular, testable, and maintainable.
- **Cloud Deployment:** Backend hosted on AWS EC2, frontend on AWS S3 Static Website, proxied through Cloudflare for DNS management, edge-caching, and SSL/HTTPS encryption.

CycloneX 🔗

Full-Stack E-commerce Web Application

Tech Stack: MongoDB, Express.js, Node.js, EJS, Bootstrap. A production-ready e-commerce platform for selling bicycles and accessories. Built using the MVC architecture with secure and responsive interfaces for both users and admins.

- **Frontend:** Built with EJS templating, Bootstrap, and custom CSS. Implemented product listing, filtering, Wishlist, cart, and responsive UI.
- **Backend:** Developed RESTful APIs with Express and Node.js. Features include authentication (JWT), cart, order management, coupons, and admin dashboard.

- Database: Managed MongoDB collections with Mongoose. Implemented validation, optimized queries, and relationship modeling.
- Security: JWT authentication, bcrypt hashing, role-based access, session & cookie handling, and input validation

Nasa Logistics

Full-Stack Logistics & Driver Management Web Application

Tech Stack: React.js, Node.js, Express.js, PostgreSQL (AWS RDS), Sequelize, Tailwind CSS. A production-ready logistics platform for managing driver availability, order workflows, and admin operations.

- Frontend: React.js with Tailwind CSS, responsive UI, and role-based Admin & Driver dashboards.
- Backend: Node.js and Express.js REST APIs with JWT authentication, availability logic, weekly resets, and order management.
- Database: PostgreSQL on AWS RDS using Sequelize with normalized schemas and timezone-aware operations.
- Security: bcrypt hashing, RBAC, rate limiting, secure cookies, and input validation.
- Deployment: Backend on AWS EC2, frontend on Vercel, DNS via AWS Route 53 with environment-based configs.
- Additional: Cron-based weekly resets, Excel reports, and application logging.

Dental Buddy — Smart Dental EMR System

Full-Stack Electronic Medical Record (EMR) System for Dental Clinics | Tech Stack: React 18, Vite, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB (Mongoose), JWT A comprehensive, modern EMR system designed specifically for dental clinics, enabling seamless clinic management through role-based access, patient management, appointment scheduling, and clinical documentation.

- Role-Based Access Control (RBAC): Implemented secure, tailored access for 5 distinct roles — Super Admin, Clinic Admin, Doctor, Receptionist, and Billing Staff — with multi-clinic support.
- Clinical Modules: Built context-aware Case Sheets, Prescriptions, and Imaging modules strictly scoped to patients to prevent clinical errors, alongside Appointments, Billing, and Analytics dashboards.
- Authentication & Security: JWT-based authentication with refresh tokens, HTTP-only cookies, bcrypt hashing, Helmet, CORS, and rate limiting for enterprise-grade security.
- Patient Management: Comprehensive patient profiles with full history, demographics, digital prescriptions, X-ray/scan imaging, and interactive appointment scheduling with doctor availability.

MINI PROJECTS

Netflix Clone

- Built a Netflix-style UI using React and Firebase
- Implemented authentication and dynamic content rendering

OLX Clone

- Developed a classifieds marketplace clone using React and Firebase
- Implemented product listing and user authentication

Todo List Application

- Built a simple Todo app to manage daily tasks
- Implemented CRUD operations with clean UI and state handling

React User Management System

- Built a user management application using React
- Implemented user CRUD operations, search, and role-based views

EDUCATION

Full Stack Development(MERN Stack)

2024 – Present

Brototype Kerala

Kerala

- Practical training in building scalable web applications using MongoDB, Express.js, React.js, and Node.js
- Focused on project-based learning and real-world coding challenges

Bachelor of Computer Application(BCA)

2021 – 2024

Bishop Speechly College for Advanced Studies, Pallom, Affiliated to Mahatma Gandhi University, Kerala

Kerala

Higher Secondary Education-Computer Science

2019 – 2021

NSS Higher Secondary School, Perunna

Perunna
